

Before

The image shows the back of a metal chassis, likely a server or industrial device. A large rectangular area is covered by a silver-colored metal mesh. This mesh is almost completely obscured by a thick layer of grey dust and small, multi-colored particles. To the left of the mesh, there is a black power jack with two pins, a small green circular LED indicator, and several screws. The entire unit is mounted on a silver metal plate with various mounting holes and slots.
